Forensics

Today

An intruder has infiltrated our network and targeted the NFS server where the backup files are stored. A classified secret was accessed and stolen. The only trace left behind is a packet capture (PCAP) file recorded during the incident. Your mission, should you accept it, is to discover the contents of the stolen data.

Note: Click the **Start Lab Machine** button to spawn the Lab Machine.

The packet capture (**challenge.pcapng**) is stored in the **~/Desktop** directory.

Easy **Forensics**

What is the flag?

Ans:-THM{not_s3cur3_fl13_sh4r1ng}

Click on the challenge.pcapng file and open it

After opening in display filter click nfs

Right click on any packet and click follow tcp stream

20	1.711711825	172.16.175.128	10.10.119.157	NFS	202	V4 Call (Reply In 19) GETATTR	SCTP

Here we can see something suspicious that is the md5 hash

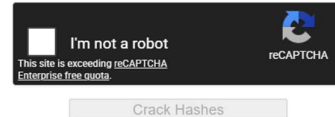

It is a password of an archive file

We will try to decrypt the hash I used online tool for decrypting it

Enter up to 20 non-salted hashes, one per line:

90eb7723a657b6597100aafe171d9f2

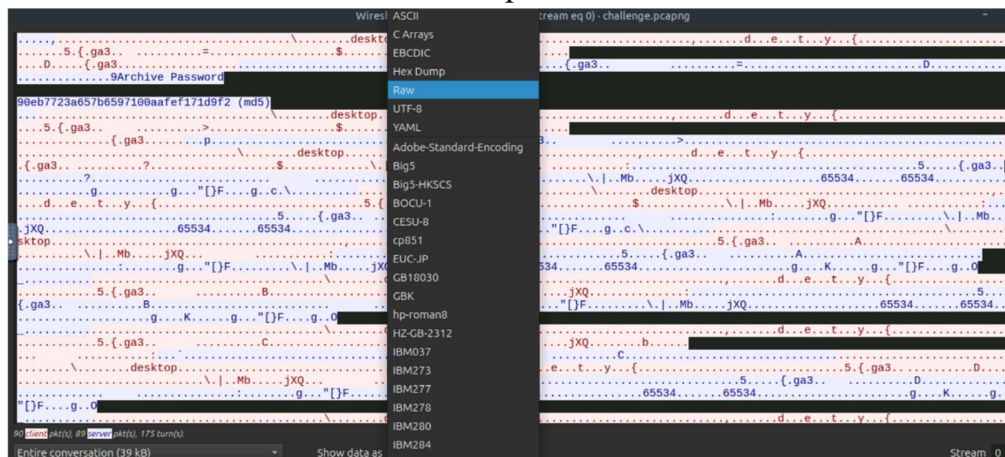

Supports: LM, NTLM, md2, md4, md5, md5(md5_hex), md5-half, sha1, sha224, sha256, sha384, sha512, ripeMD160, whirlpool, MySQL 4.1+ (sha1 sha1_bin), QubesV3.1BackupDefaults

Hash	Type	Result
90eb7723a657b6597100aafe171d9f2	md5	avengers

So we got the password as avengers

Now we will try to save that tcp stream as file.zip and we will try to decode it

Now we will save this as raw and file.zip

So

```
ubuntu@ip-10-48-137-205:~$ ls
Desktop  Documents  Downloads  Music  Pictures  Public  Templates  Videos  file.zip  snap
ubuntu@ip-10-48-137-205:~$
```

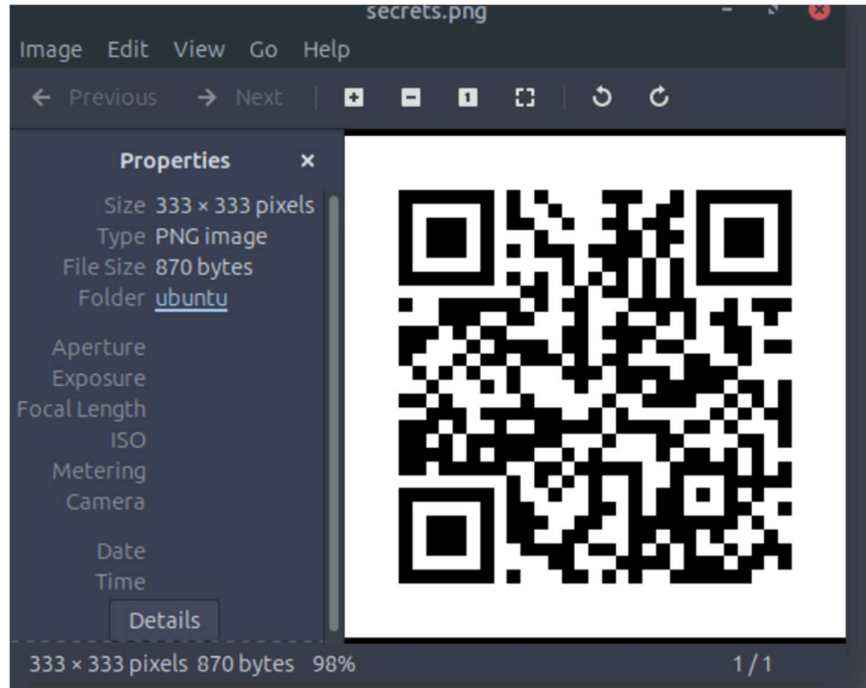

```
ubuntu@ip-10-48-137-205:~$ unzip file.zip
Archive:  file.zip
warning [file.zip]: 36452 extra bytes at beginning or within zipfile
           (attempting to process anyway)
[file.zip] secrets.png password:
```

Now it is asking for password .

The password is avengers as we decrypted that hash

```
ubuntu@ip-10-48-137-205:~$ ls
Desktop  Documents  Downloads  Music  Pictures  Public  Templates  Videos  file.zip  secrets.png  snap
```

So we got a new file secrets.png

We got a QR code and we will try to decode this using any platform

After scanning the QR we got flag as **THM{n0t_s3cur3_f1l3_sh4r1ng}**
